

## Next Generation Sustainable Building Practice

Greeneck Reclamation is a local company specializing in the reclamation of existing buildings and the valuable materials they hold within.

We offer complete solutions for strategic deconstruction of existing buildings, resulting in a cost effective and environmentally sound solution to your demolition needs.

## Your existing Building and it's inherent Value

Every remodel or demolition project removes building materials from a specific location and transfers them to another. 99% of the time this new location is the landfill.

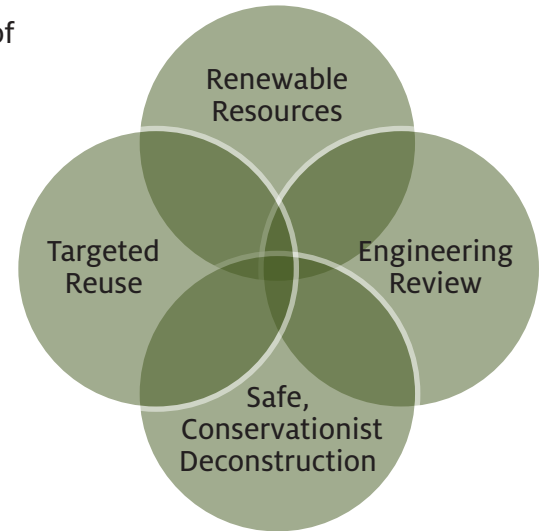

Our goal at Greeneck Reclamation is to carefully segregate the reusable and non-reusable materials throughout the demolition process of existing building.

- To minimize the wasteful expenditure of economically and environmentally valuable resources.
- To work with your builder to utilize the reclaimed products in your new structure.
- Remove from the site any undesired materials and find the most environmentally effective use for them.

## Our Products and Services are Simple to Understand

- Greeneck Reclamation specializes in safe, cost effective removal of building materials from existing structures
- Greeneck Reclamation’s machinery is fueled with biodiesel
- Greeneck Reclamation is a reclaimed building materials clearinghouse

## Cost Comparison

Though more time is spent in the demolition process, the cost savings are obvious

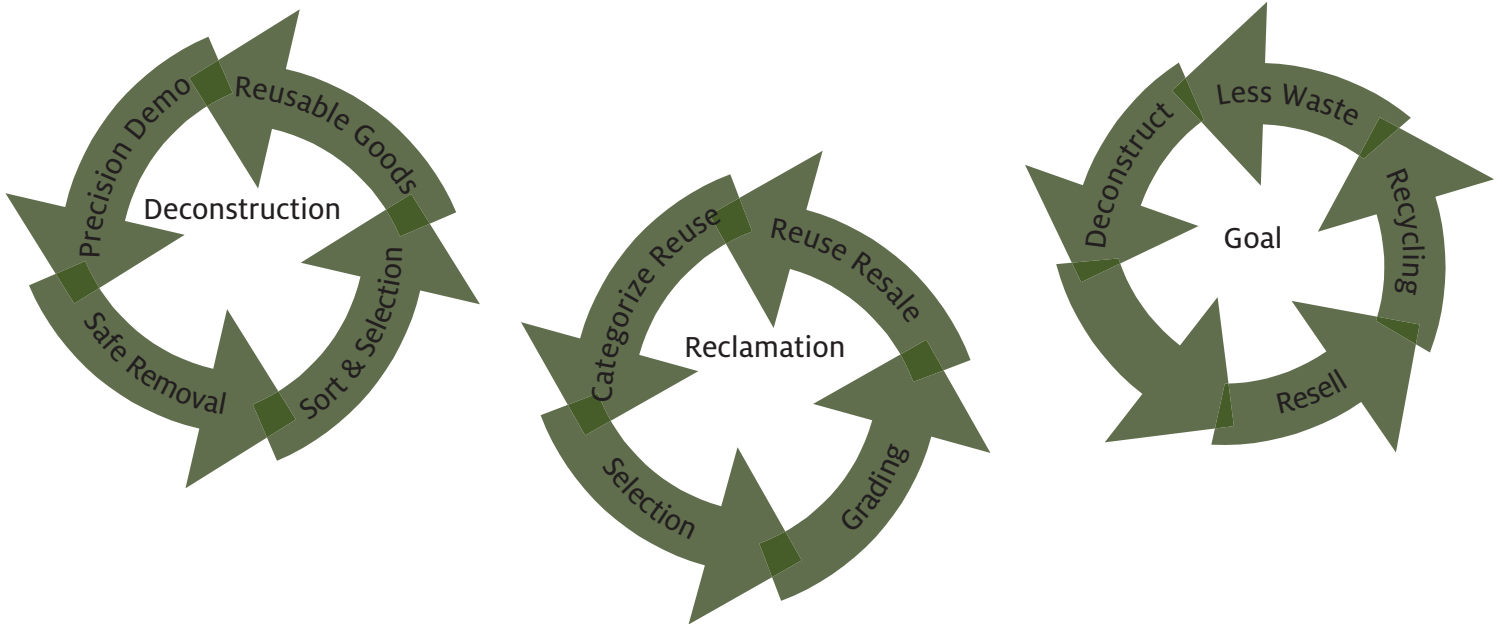

<b>Demolition Services</b>	<b>Greeneck Reclamation (Demo and Removal)</b>	<b>Excavation company* (Demo and Removal)</b>
5300 square foot house located in Jackson Hole	\$44,975	\$52,705
<b>Final Location of Materials</b>		
Foundation	Crushed into road base rock chips	Landfill or buried somewhere
Framing Material	55% direct intended reuse 35% firewood/mulch 10% landfill	Landfill or non-heat source burn pile
Interior and Exterior Finishes	60% direct intended reuse 35% mulch 5% landfill	Landfill or non-heat source burn pile
Drywall	Recycled or Composted	Landfill
Roofing and Insulation	50% Recyclability Average 30% non intended reuse 20% Landfill	Landfill

\*Based on an estimate from an independent excavation company.

## Mission

Our mission and moral goal is to reuse 90+ percent of the materials reclaimed.

## Reuse Prior to Recycling and You Reduce Even More

Reclaiming existing structures saves landfill space, reduces transportation emissions, and conserves valuable resources.

- The Reclamation movement has been quite prevalent concerning old structures with aesthetic woods. Greeneck Reclamation saves and reuses the structural wood and salvageable building materials in the building as well. We are always striving to find a use for every piece of material we find!
- Conservationist utilitarianism is the future of sustainable building practice and we are on the front lines fighting our way to a better tomorrow.

## Take the Next Step

Decide that conservation-minded Greeneck Reclamation is right for your project. When you do so, we will begin with an evaluation and estimation of your project. Call us today for more information.
